## The SEM600VC

The SEM600-VC puts versatile powerful performance at the heart of your kitchen. Ideal for grilling and finishing, our precise height adjustment system allows you to bring the right heat to your food giving quality results on time every time. Featuring our clean efficient vitro ceramic infrared technology which minimises smoke and odours, the speed of cooking and the rapid heat up times ( 400'C in 9 seconds ! ) save on energy consumption without compromising on performance.

Features: 2 cooking zones.

<b>Weight</b>	<b>45kg</b>
<b>Dimensions (mm)</b>	<b>600 x 590 x 590</b>
<b>Element Type</b>	<b>Infrared Ceramic</b>
<b>Power</b>	<b>3Kw</b>
<b>Power Connection</b>	<b>13amp plug</b>
<b>Cooking Grid Area (mm)</b>	<b>600 x 400</b>
<b>Price</b>

## The SEM600VC

### Energy Efficiency

A traditional hard incoloy element salamander grill has a heat up time of approximately 10 minutes. The SEM600VC has a heat up time to 400°C of just 9 seconds! Therefore the SEM600VC will use 500W less electricity simply reaching cooking temperature, saving 6.25 pence against your electricity bill;

3Kwh / 60minutes x 10 minutes = 500W energy saving = approx £0.0625 cost saving

The SEM600VC saves energy through its rapid heat up time, thereby not being required to be left on all day awaiting use. The SEM600VC is turned on only when required, reducing energy waste, reducing component wear and bringing real savings against your energy costs. If the grill was only actually cooking for half the day the SEM600VC will save over £13 per week

10 hour day x 3Kw/h = 30Kwh @ 12.5pence per Kwh = £3.75 per day  
Divide by 2 = £1.88 saving per day x 7 day week = weekly saving of £13.16

2011 MRP = £1540 divided by £13.16 = 117 week pay back.

***On this basis the SEM600VC would pay for itself in 2 years!***

Model shown is SEM800VC
